

By bike, on foot... How to plan a hiking trip in France?

RandoCamping is a free website that brings together on an interactive map everything a hiker or cycle-tourist needs to plan their trip in France: suitable accommodation, marked routes, train stations and, since version 1.1, tools to plan daily stages and generate a complete roadbook.

RandoCamping – Accommodation, routes and train stations on a single map

Accommodation

Campsites, hiker stops, gîtes d'étape, refuges and youth hostels. Data comes from the national [DataTourisme](#) platform and users. Available filters: tent pitches, bike-friendly, municipal, cabins, user reviews.

Trains & Stations

All French passenger stations indicating whether platforms are reachable with a non-dismantled bike (stairs, lifts...). Links to regional TER bike reservation. Search for rail routes between stations (TGV, TER, Intercités).

Routes

Long-distance footpaths, cycle routes and cycle paths. Route planning with BRouter or OpenRoute Service. Display and export of GPX tracks.

Collaborative

Accommodation providers and hikers contribute: adding and modifying listings, user reviews. All contributions are verified before publication.

Advanced features

Plan my hike

Load a GPX file, set the number of days and your effort level, and the site automatically splits your route into daily stages. For each night, available accommodation is displayed according to your criteria. Stages can be adjusted manually and each segment's route can be refined using the built-in route editing tool.

Generate a PDF roadbook

In one click, export a complete PDF document including detailed maps for each stage, distances, elevation profiles, your selected accommodation and personal notes. Perfect for planning your trip, printing it out or taking it on your smartphone.

Personal space & cloud storage

GPX tracks, accommodation selections and bookmarks are saved in your local personal space (browser). Connected users can sync them to the cloud: access from any device, sharing by direct link — no account needed for the recipient. Synchronisation is optional and on demand.

Intermodality: train + hiking

From any station page, search for rail routes to your destination (TGV, TER, Intercités, Transilien) with filters on the number of connections and visualisation of intermediate stations on the map. Direct link to regional TER bike reservation for each area.

Navigation & route planning

Real-time GPS tracking on the map. **Go there:** calculates in one click the route from your current position to any point on the map. BRouter and OpenRoute Service calculators integrated, with profile customisation (surface, signed routes, traffic avoidance...).

Progressive web app (PWA)

Accessible like a standard website or installable on a smartphone. Usable offline or with a weak connection. High-resolution vector maps with smooth zoom.
